

Get Population Health Insights While You Stay Focused on the Patient

Access actionable insights directly in the patient record in the EHR

One challenge with applying population health insights: It often takes too long to search, access, and filter information from your EHR or a population health solution. Now, you can keep your focus on the patient in front of you and still gain insights based upon multi-sourced data—and apply these insights in clinical practice.

To help medical practices use data during patient encounters, **NextGen® Population Health** delivers patient-specific insights based on multi-sourced data directly at the point of care. Insights are displayed right alongside the patient chart in the EHR.

Now it's easy to apply population health in clinical practice. Providers can see information on gaps in care and risk stratification for each patient—with no interruption to their workflow.

Insights at the point of care: *Why it matters*

Access to patient information remains challenging

50 percent of physicians said they were not satisfied with patient data access, including access to information on medication adherence, prescription costs, and clinical history.¹

Value-based care adds to the administrative burden of physicians

61 percent of physicians said value-based care will have a negative impact on their practice.²

Too much time is being spent in the EHR

16 minutes and 14 seconds—that's the average amount of time spent using the EHR for each patient visit—longer than the usual 15-minute patient appointment. Physicians may spend more time on the EHR than with patients.³

How it works

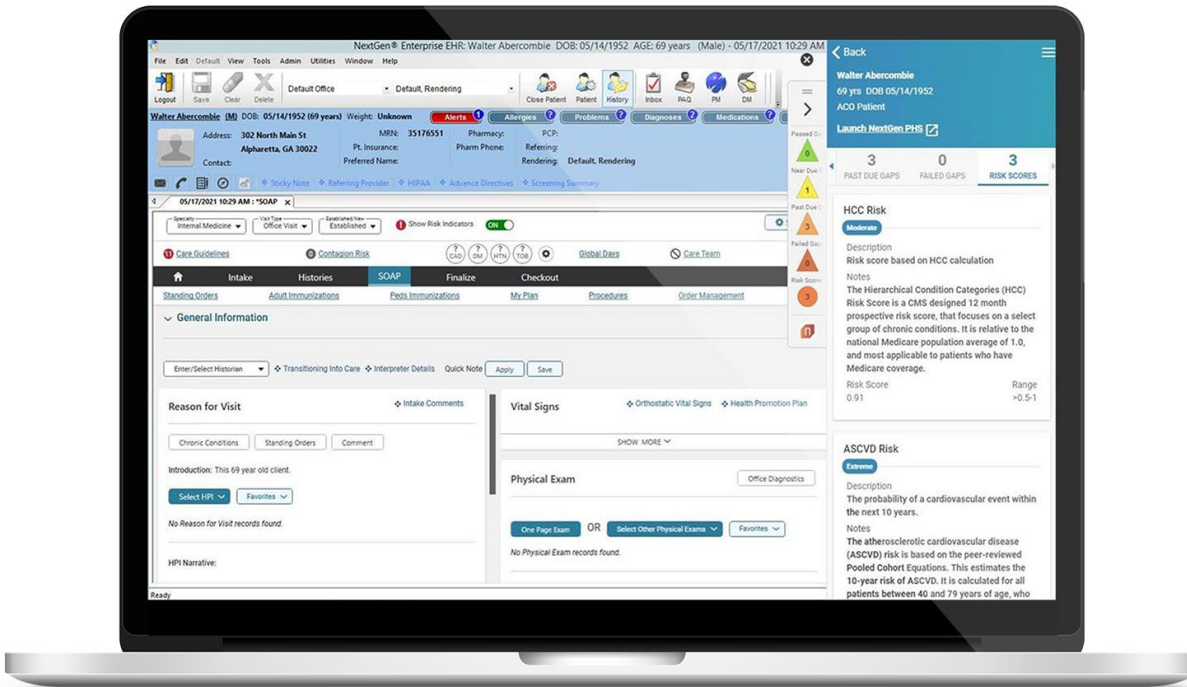

Seamless, real-time knowledge delivery provides insights from NextGen Population Health—without the need to leave the EHR. The patented technology:

- Detects and identifies the provider as they log in to the EHR and open a patient chart
- Automatically delivers relevant patient information from a variety of third-party sources such as insurance payers and labs to augment information from EHR and practice management (PM) systems
- Displays insights in an unobtrusive ribbon that appears **alongside the patient chart**

The technology that delivers these insights is inclusive—it can source relevant patient information from third-party systems and deliver it to the EHR.

How NextGen Population Health can help

Precise insights delivered at the point of care improve access to patient information, make it easier to meet requirements of value-based care, and reduce time spent on the EHR.

NextGen Population Health displays insights based multi-sourced data directly alongside the patient chart. Gain the benefits of population health without exiting the workflow.
